

Pitchforks and Pitchfan

Cheat Sheet

www.chartchampions.com

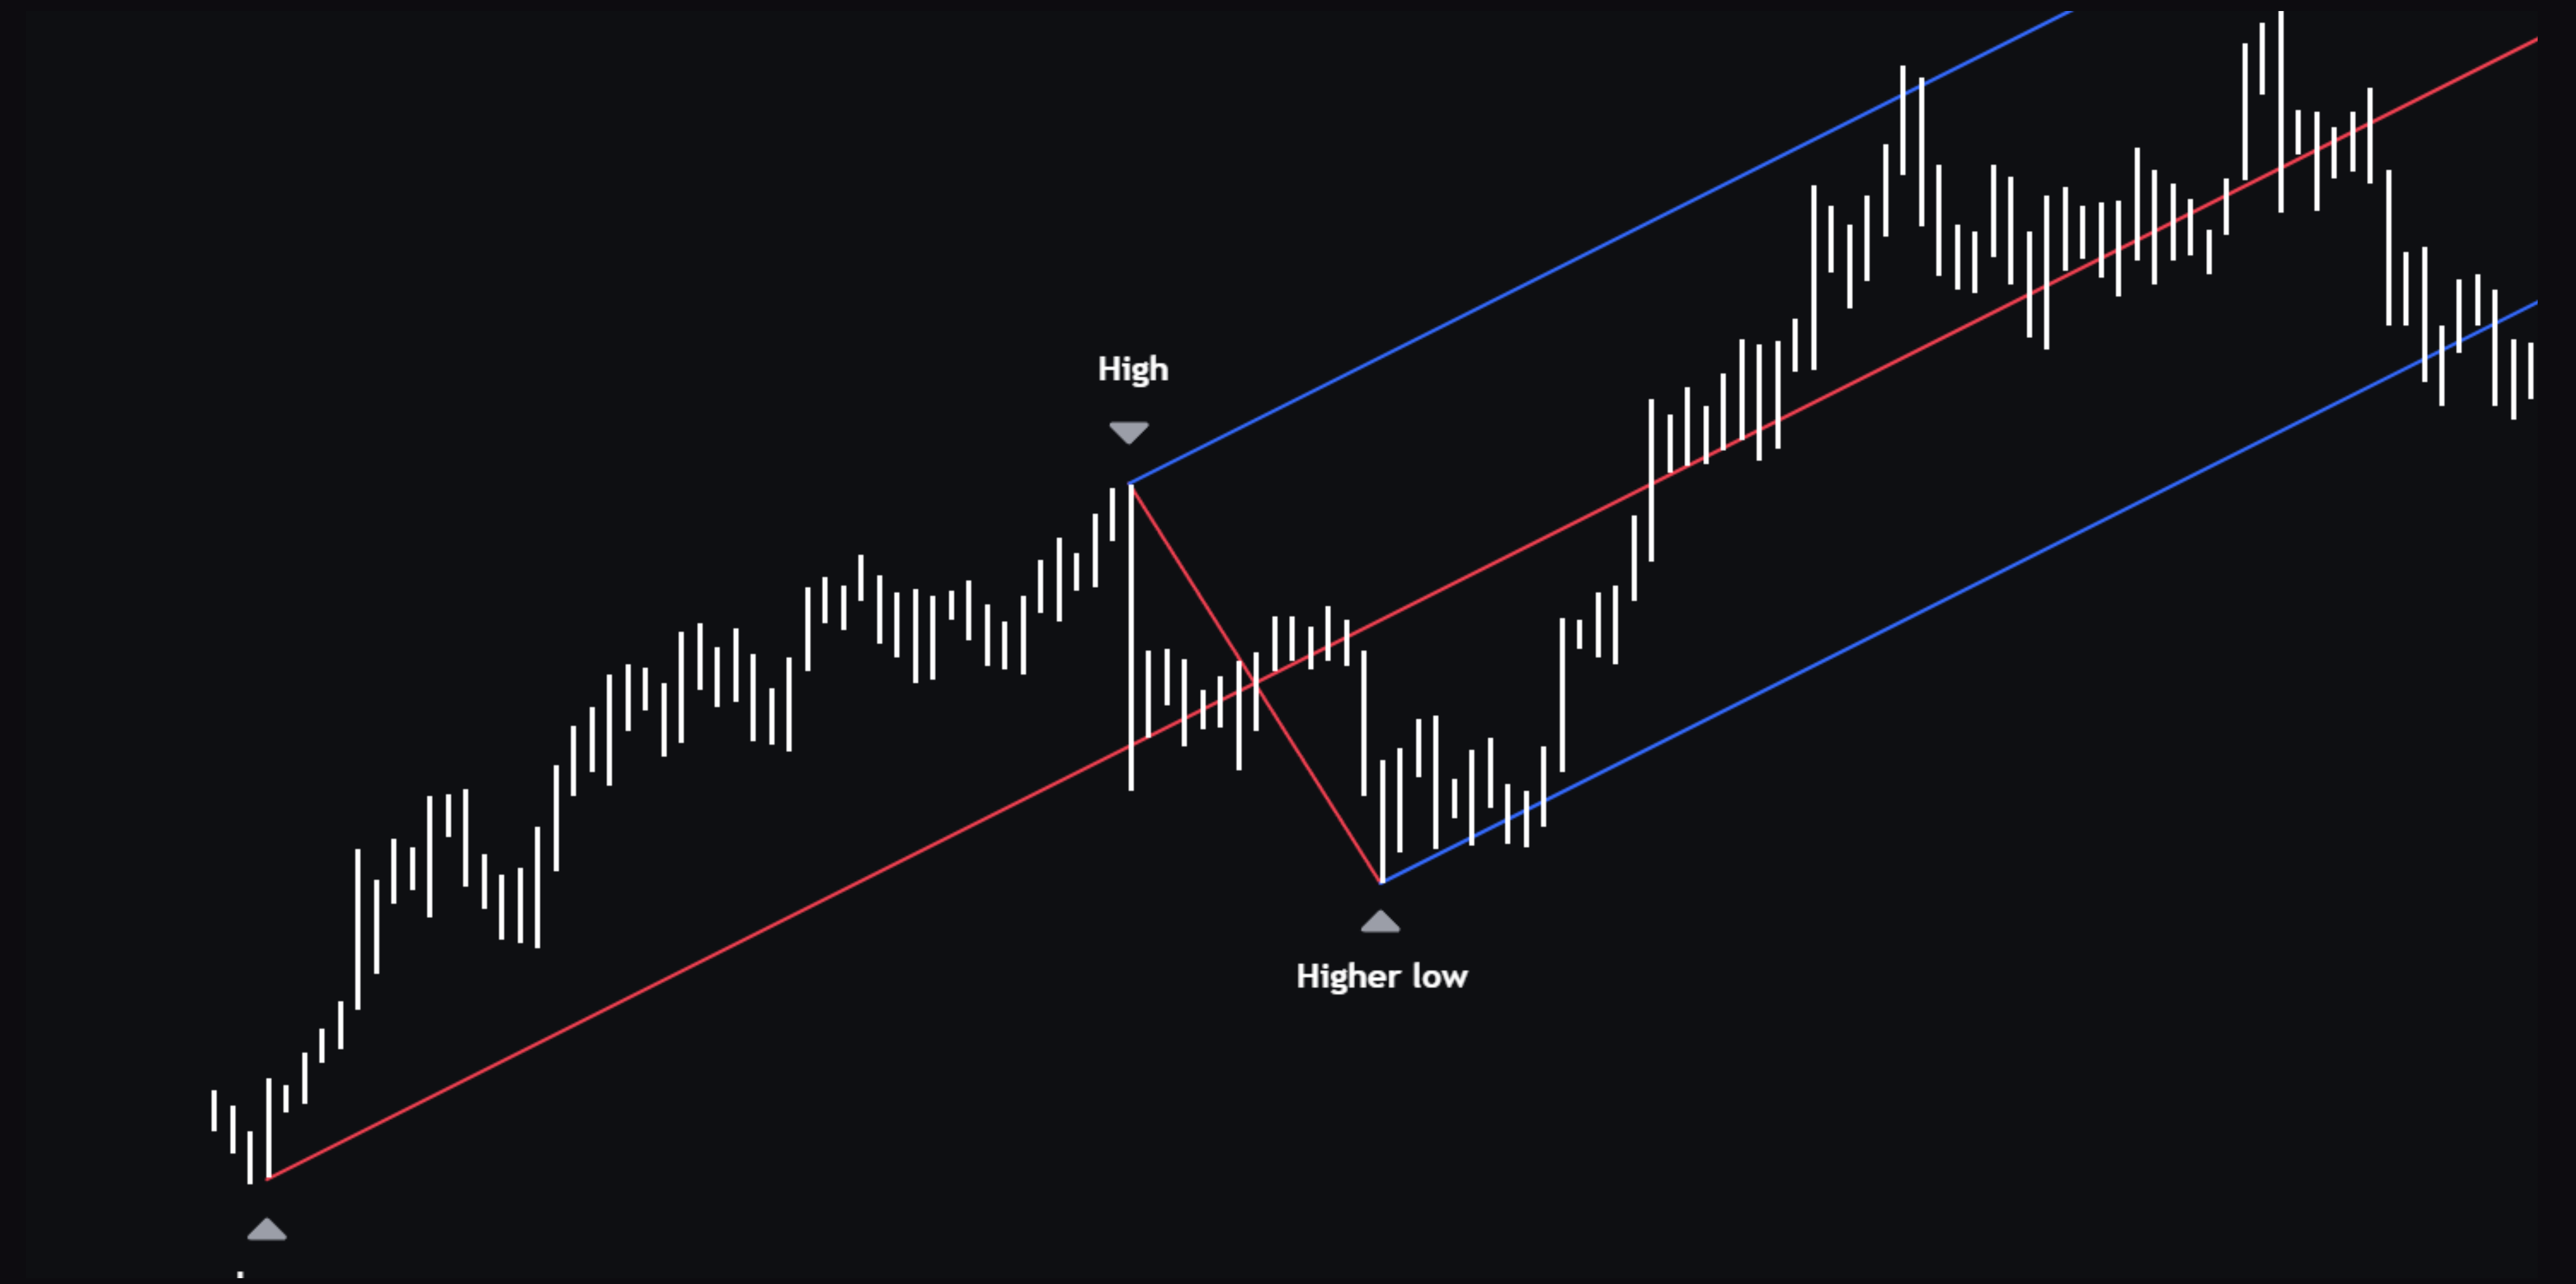

Downside Impulse:

from high to low to lower high

Upside Impulse:

from low to high to higher low

Pitchforks has three significant pivots to build. High time frame preferred.

Ideally, the third pivot corresponds to a CC Fibonacci Level.

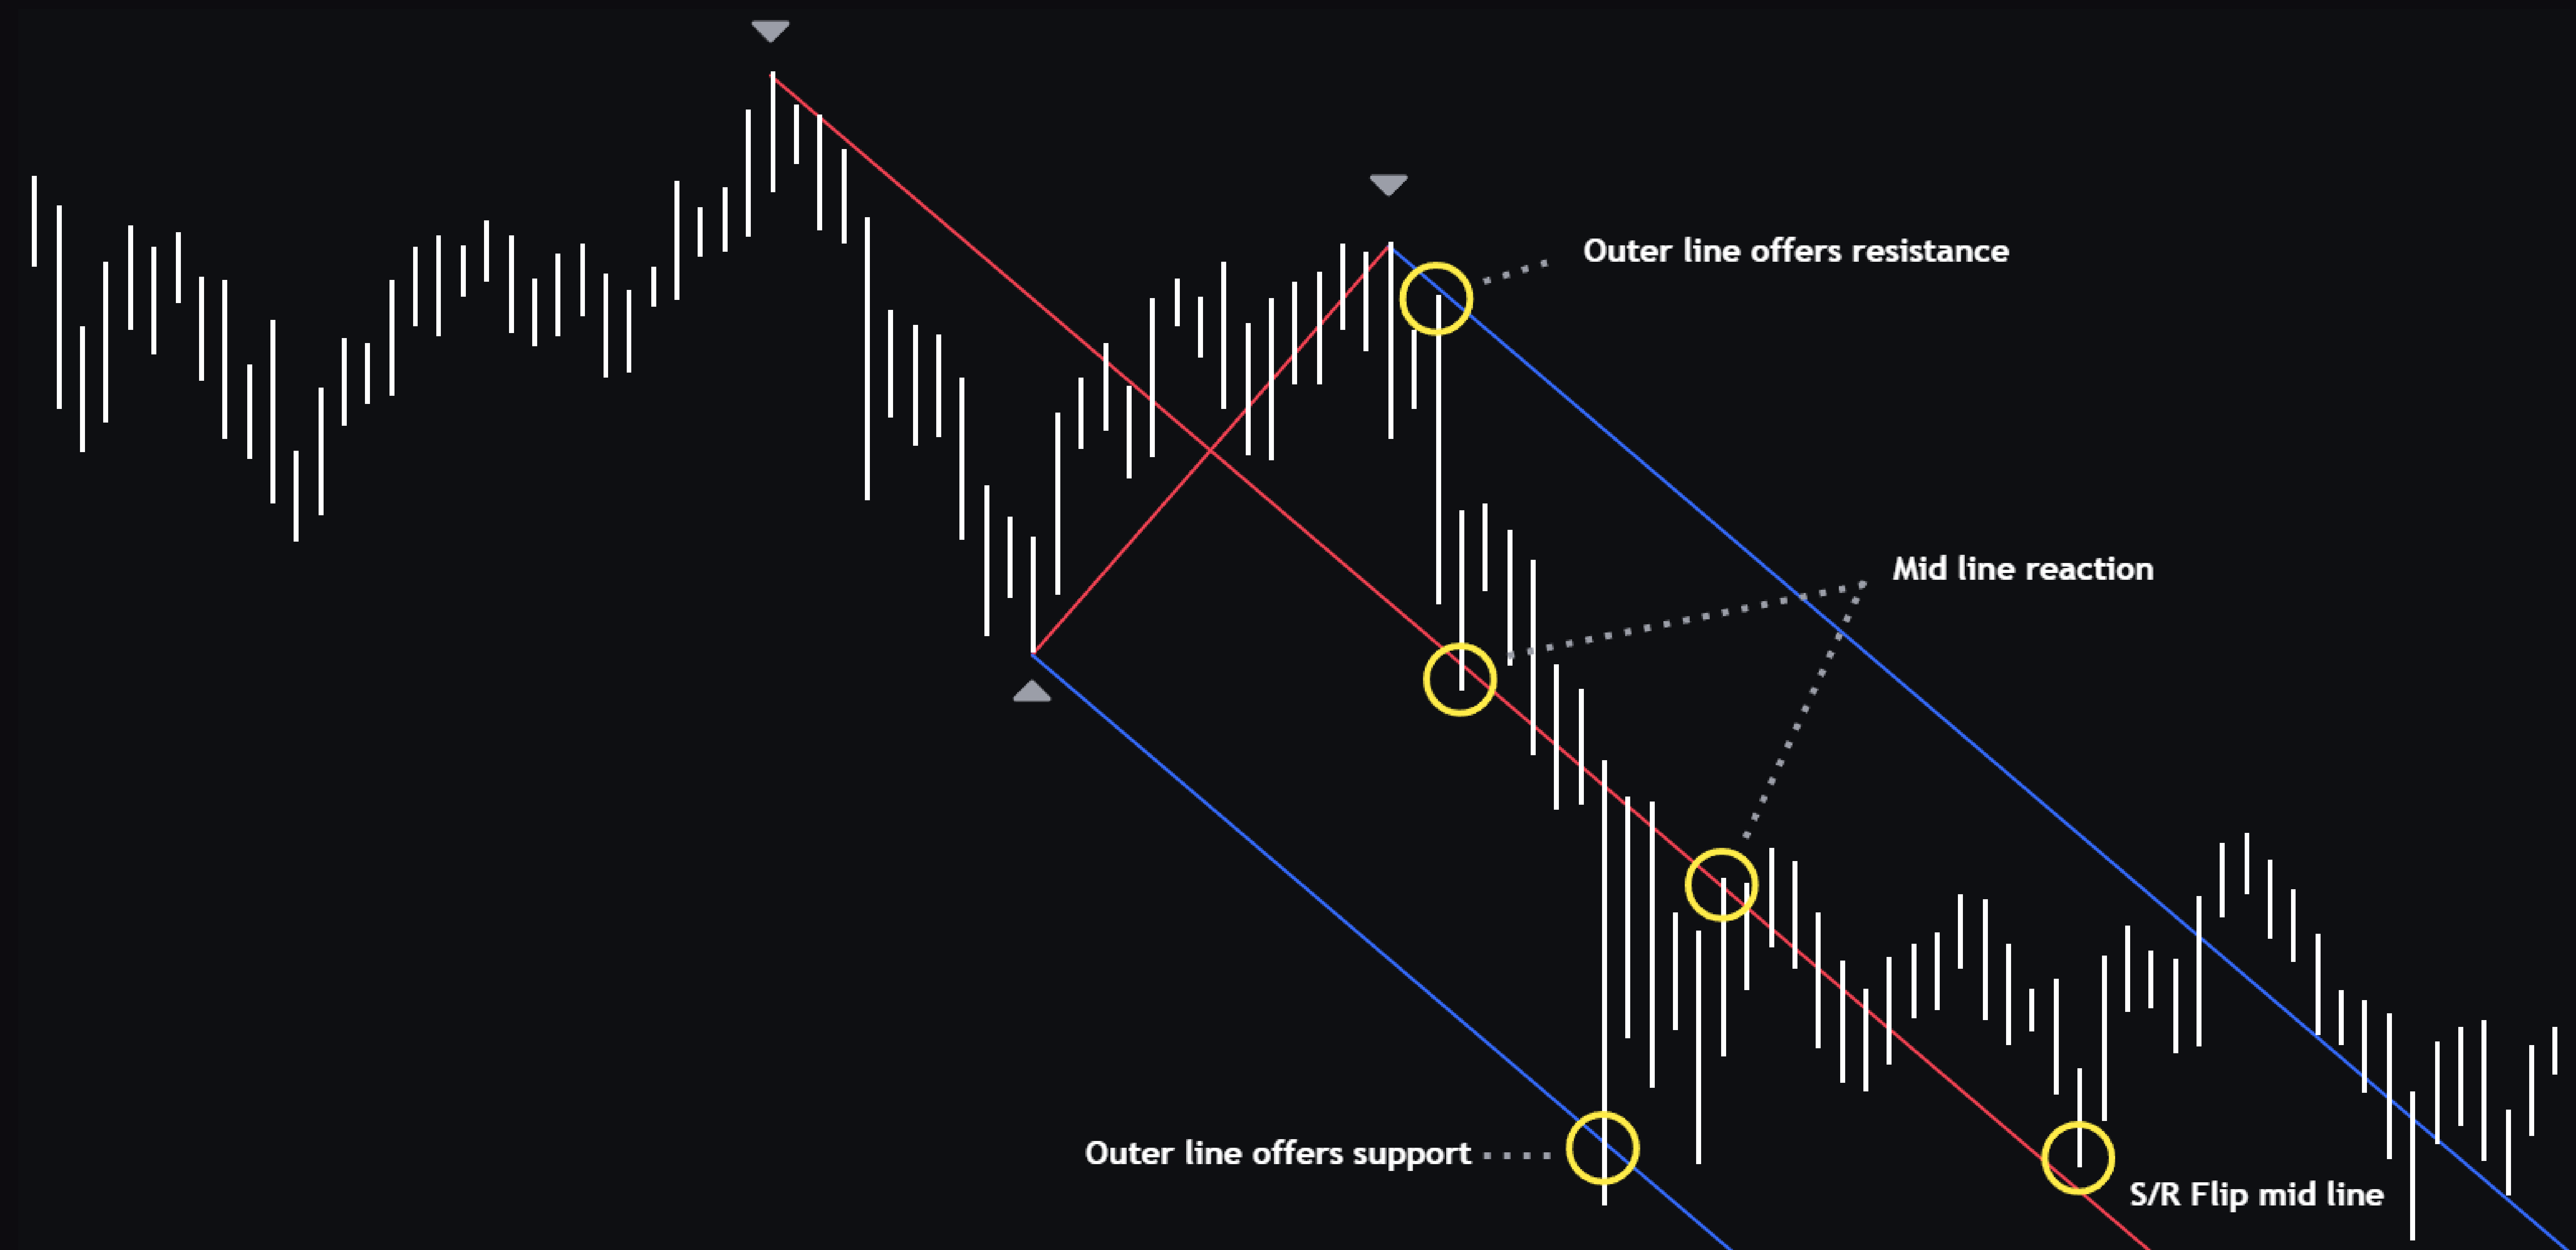

Pitchfork Part I (2:52)

The outer line offers support and resistance.

The median line offers rejection. It's possible to trade the Support/Resistance flip of the median line to the outer line.

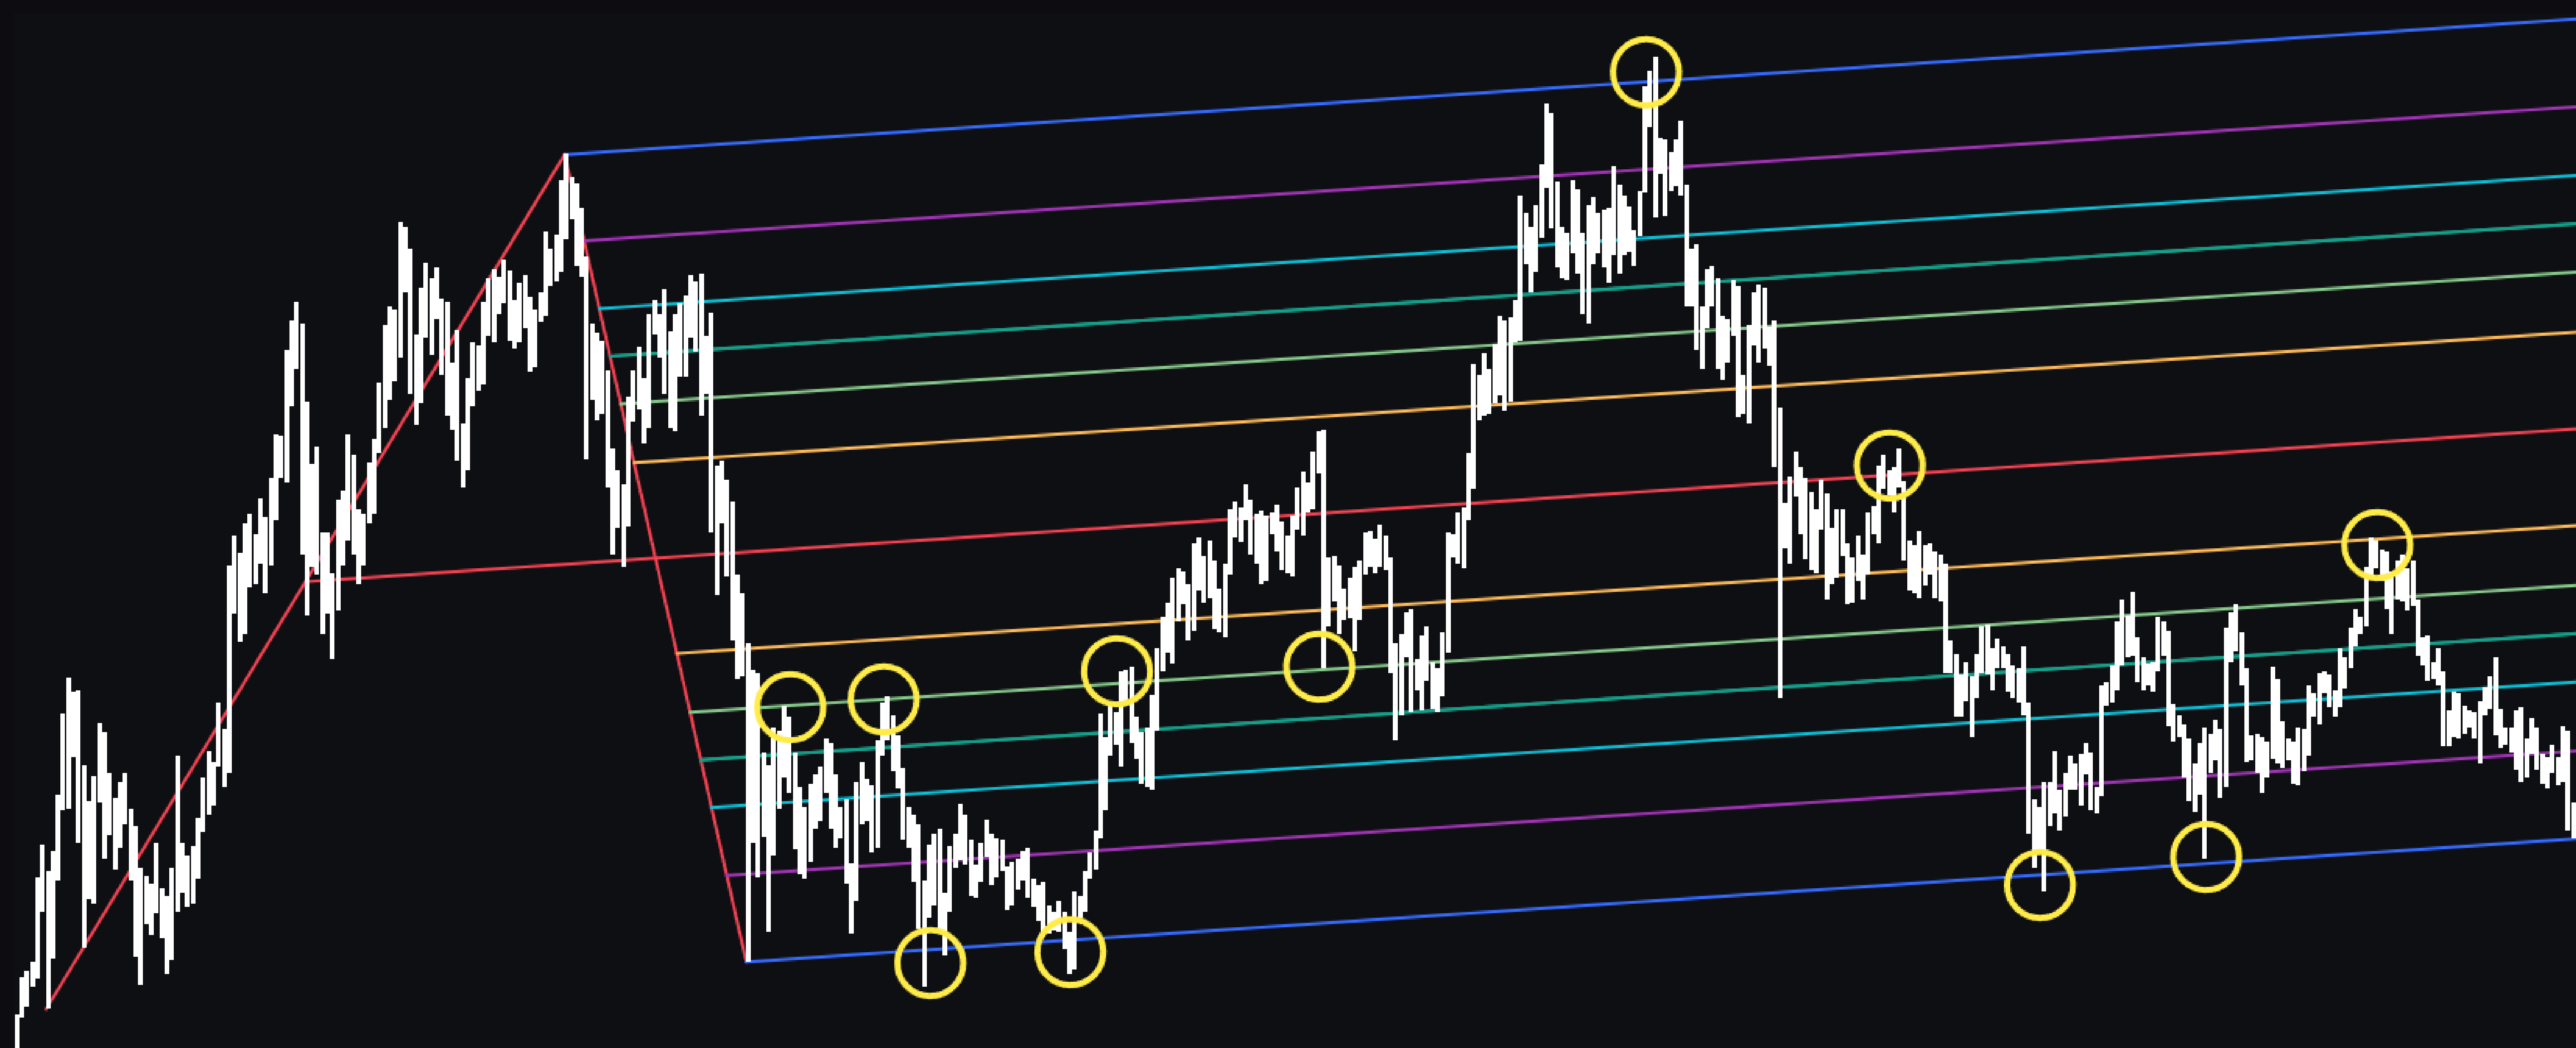

Pitchfork Part II (25:21)

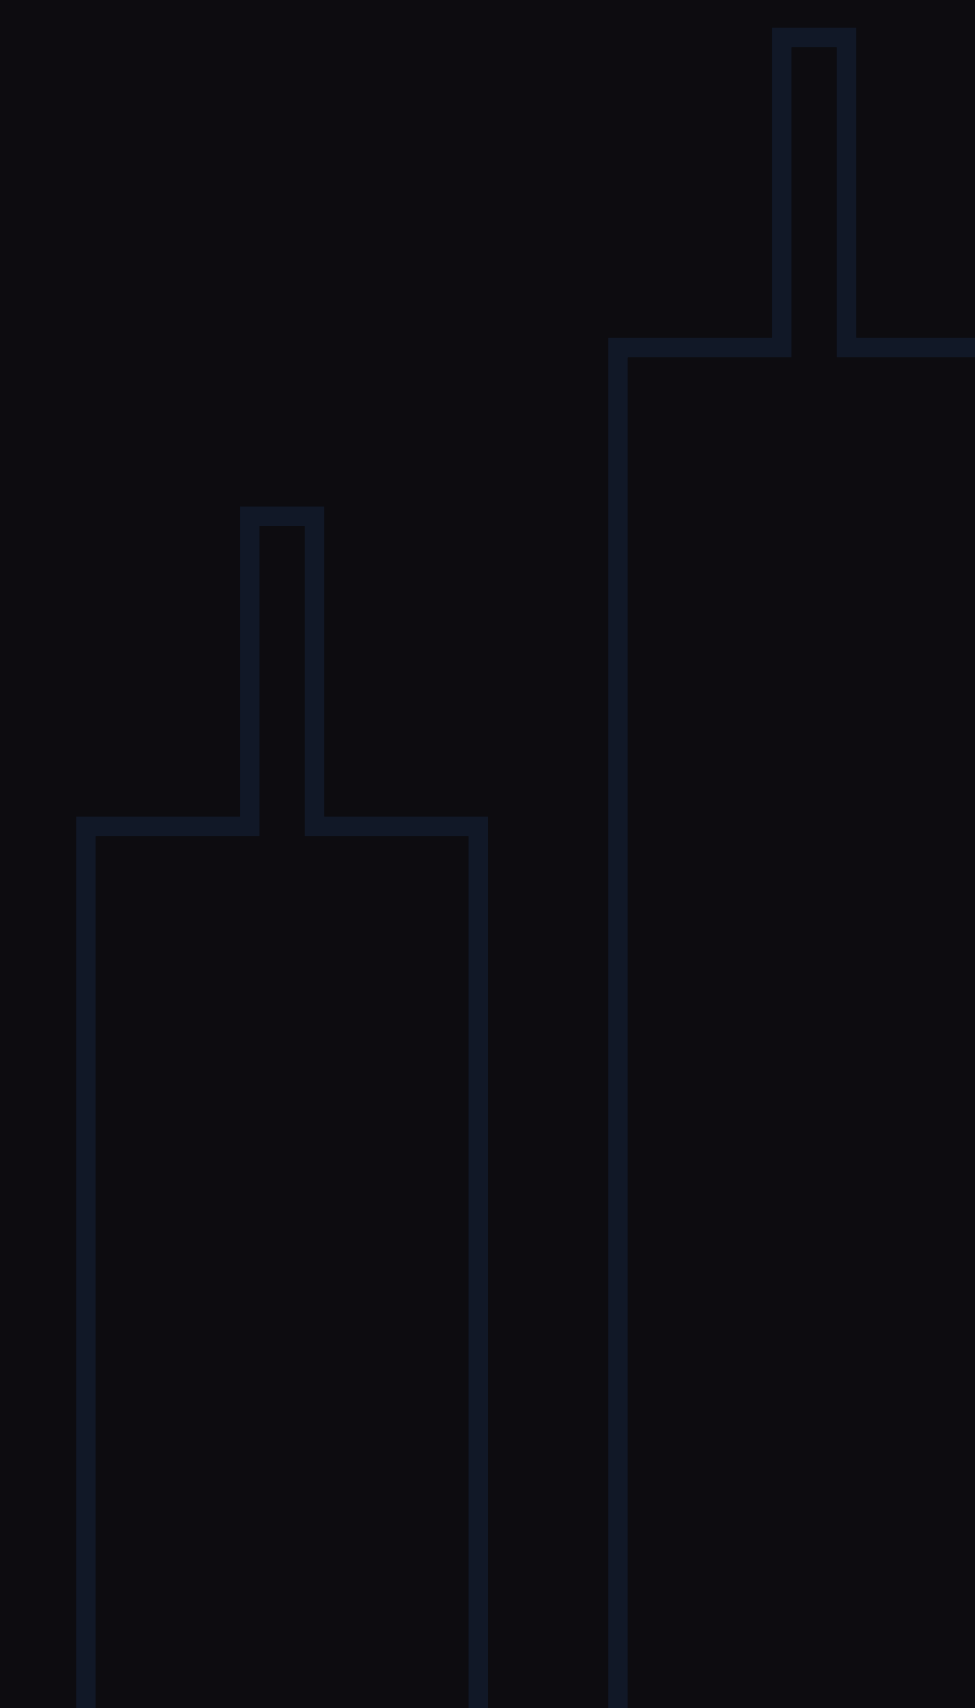

Fibonacci Pitchfork

In the following example, we pull a Fibonacci Pitchfork over a high time frame to check the interaction of the price action with the different Fibonacci levels, lower timeframes can be used to look for possible entries and price targets.

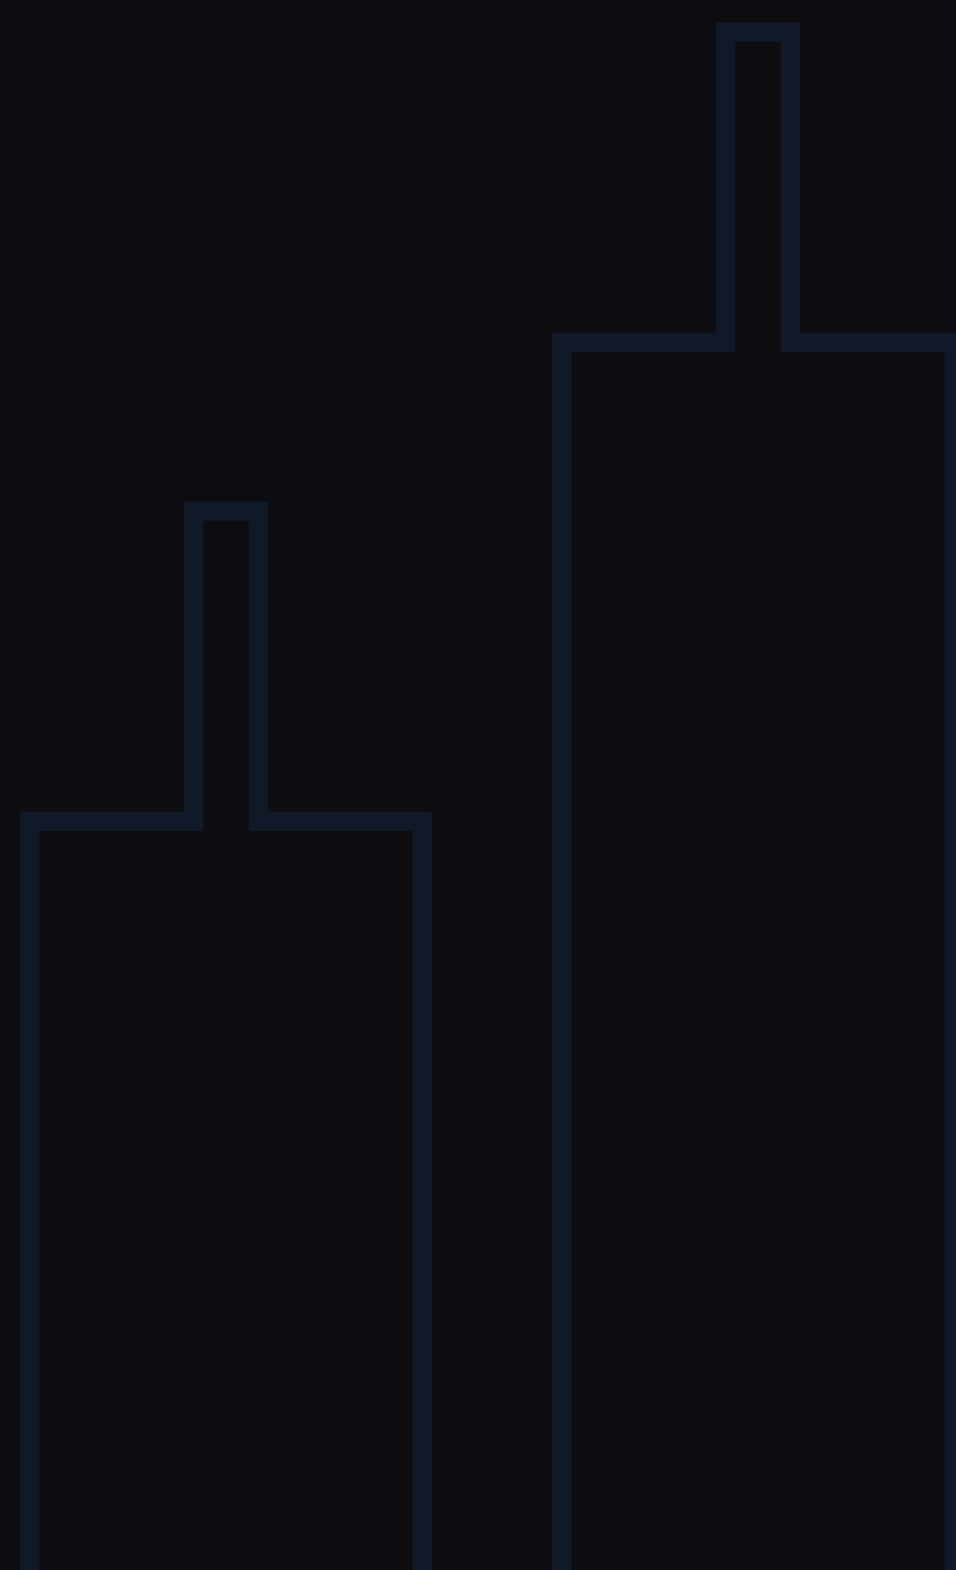

Fibonacci Pitchfork is a modified version of the standard Pitchfork. It is built using three significant pivots and used for high-time timeframe analysis.

Pitchfork Part II (36:36)

It's a combination of a Pitchfork and a Speed Fan. It is used for Time analysis.

In combination with other tools such as Pitchforks can give great confluences and opportunities.

Pitchfan Part II (43:10)

Fibonacci levels: 0.25, 0.382, 0.5, 0.618 1.25, 1, 1.618

In the following example, we pull a Pitchfan over a high time frame to check the interaction of the price action with the internal and external Fibonacci levels and possible entries and price targets.
