

Support and Resistance

Cheat Sheet

Support and Resistance

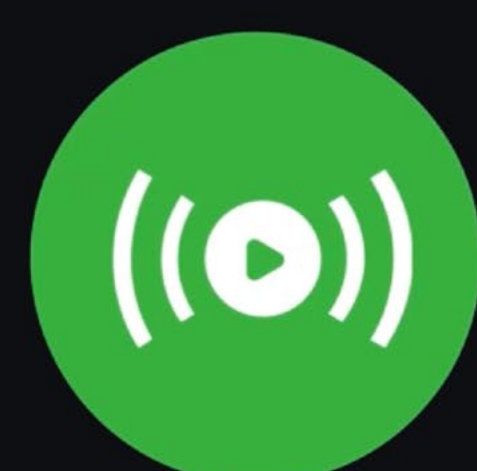

Support and Resistance are the fundamentals of trading, and they are among the strongest and most effective tools to use.

We start on the HTF and work the way down, marking out levels as part of our trading routine.

Basic

Support resistance

Basic module: Support and Resistance

We prefer to mark Horizontal levels as they are much more reliable than trendlines and follow specific criteria to be identified. The more a level is tested, the weaker it becomes.

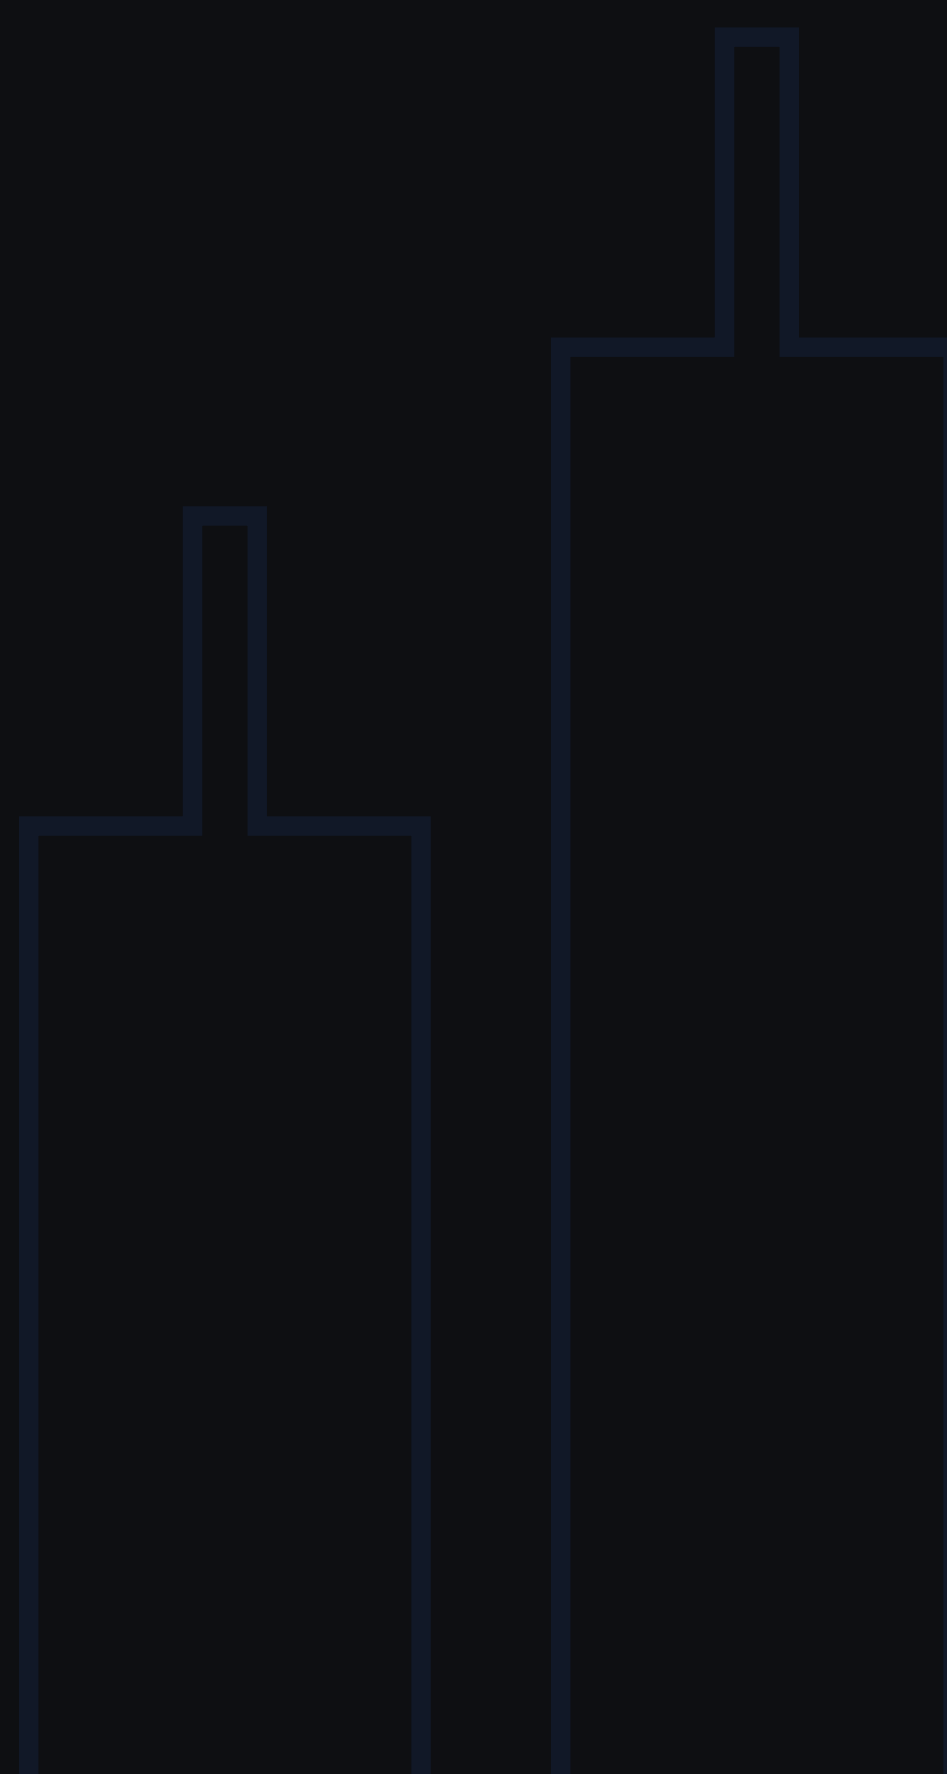

Horizontal Levels

The HTF Horizontal levels are marked using a colour criteria:

Monthly in **Purple**

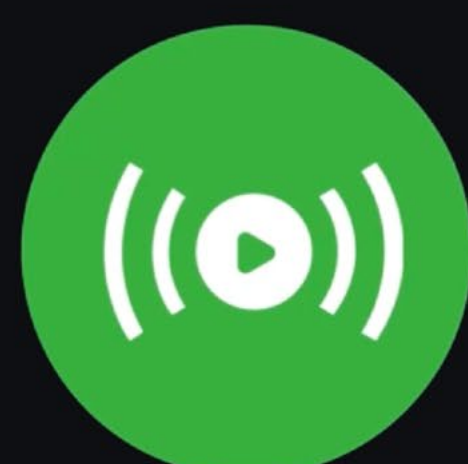

Weekly in **Yellow**

Daily in **Blue**

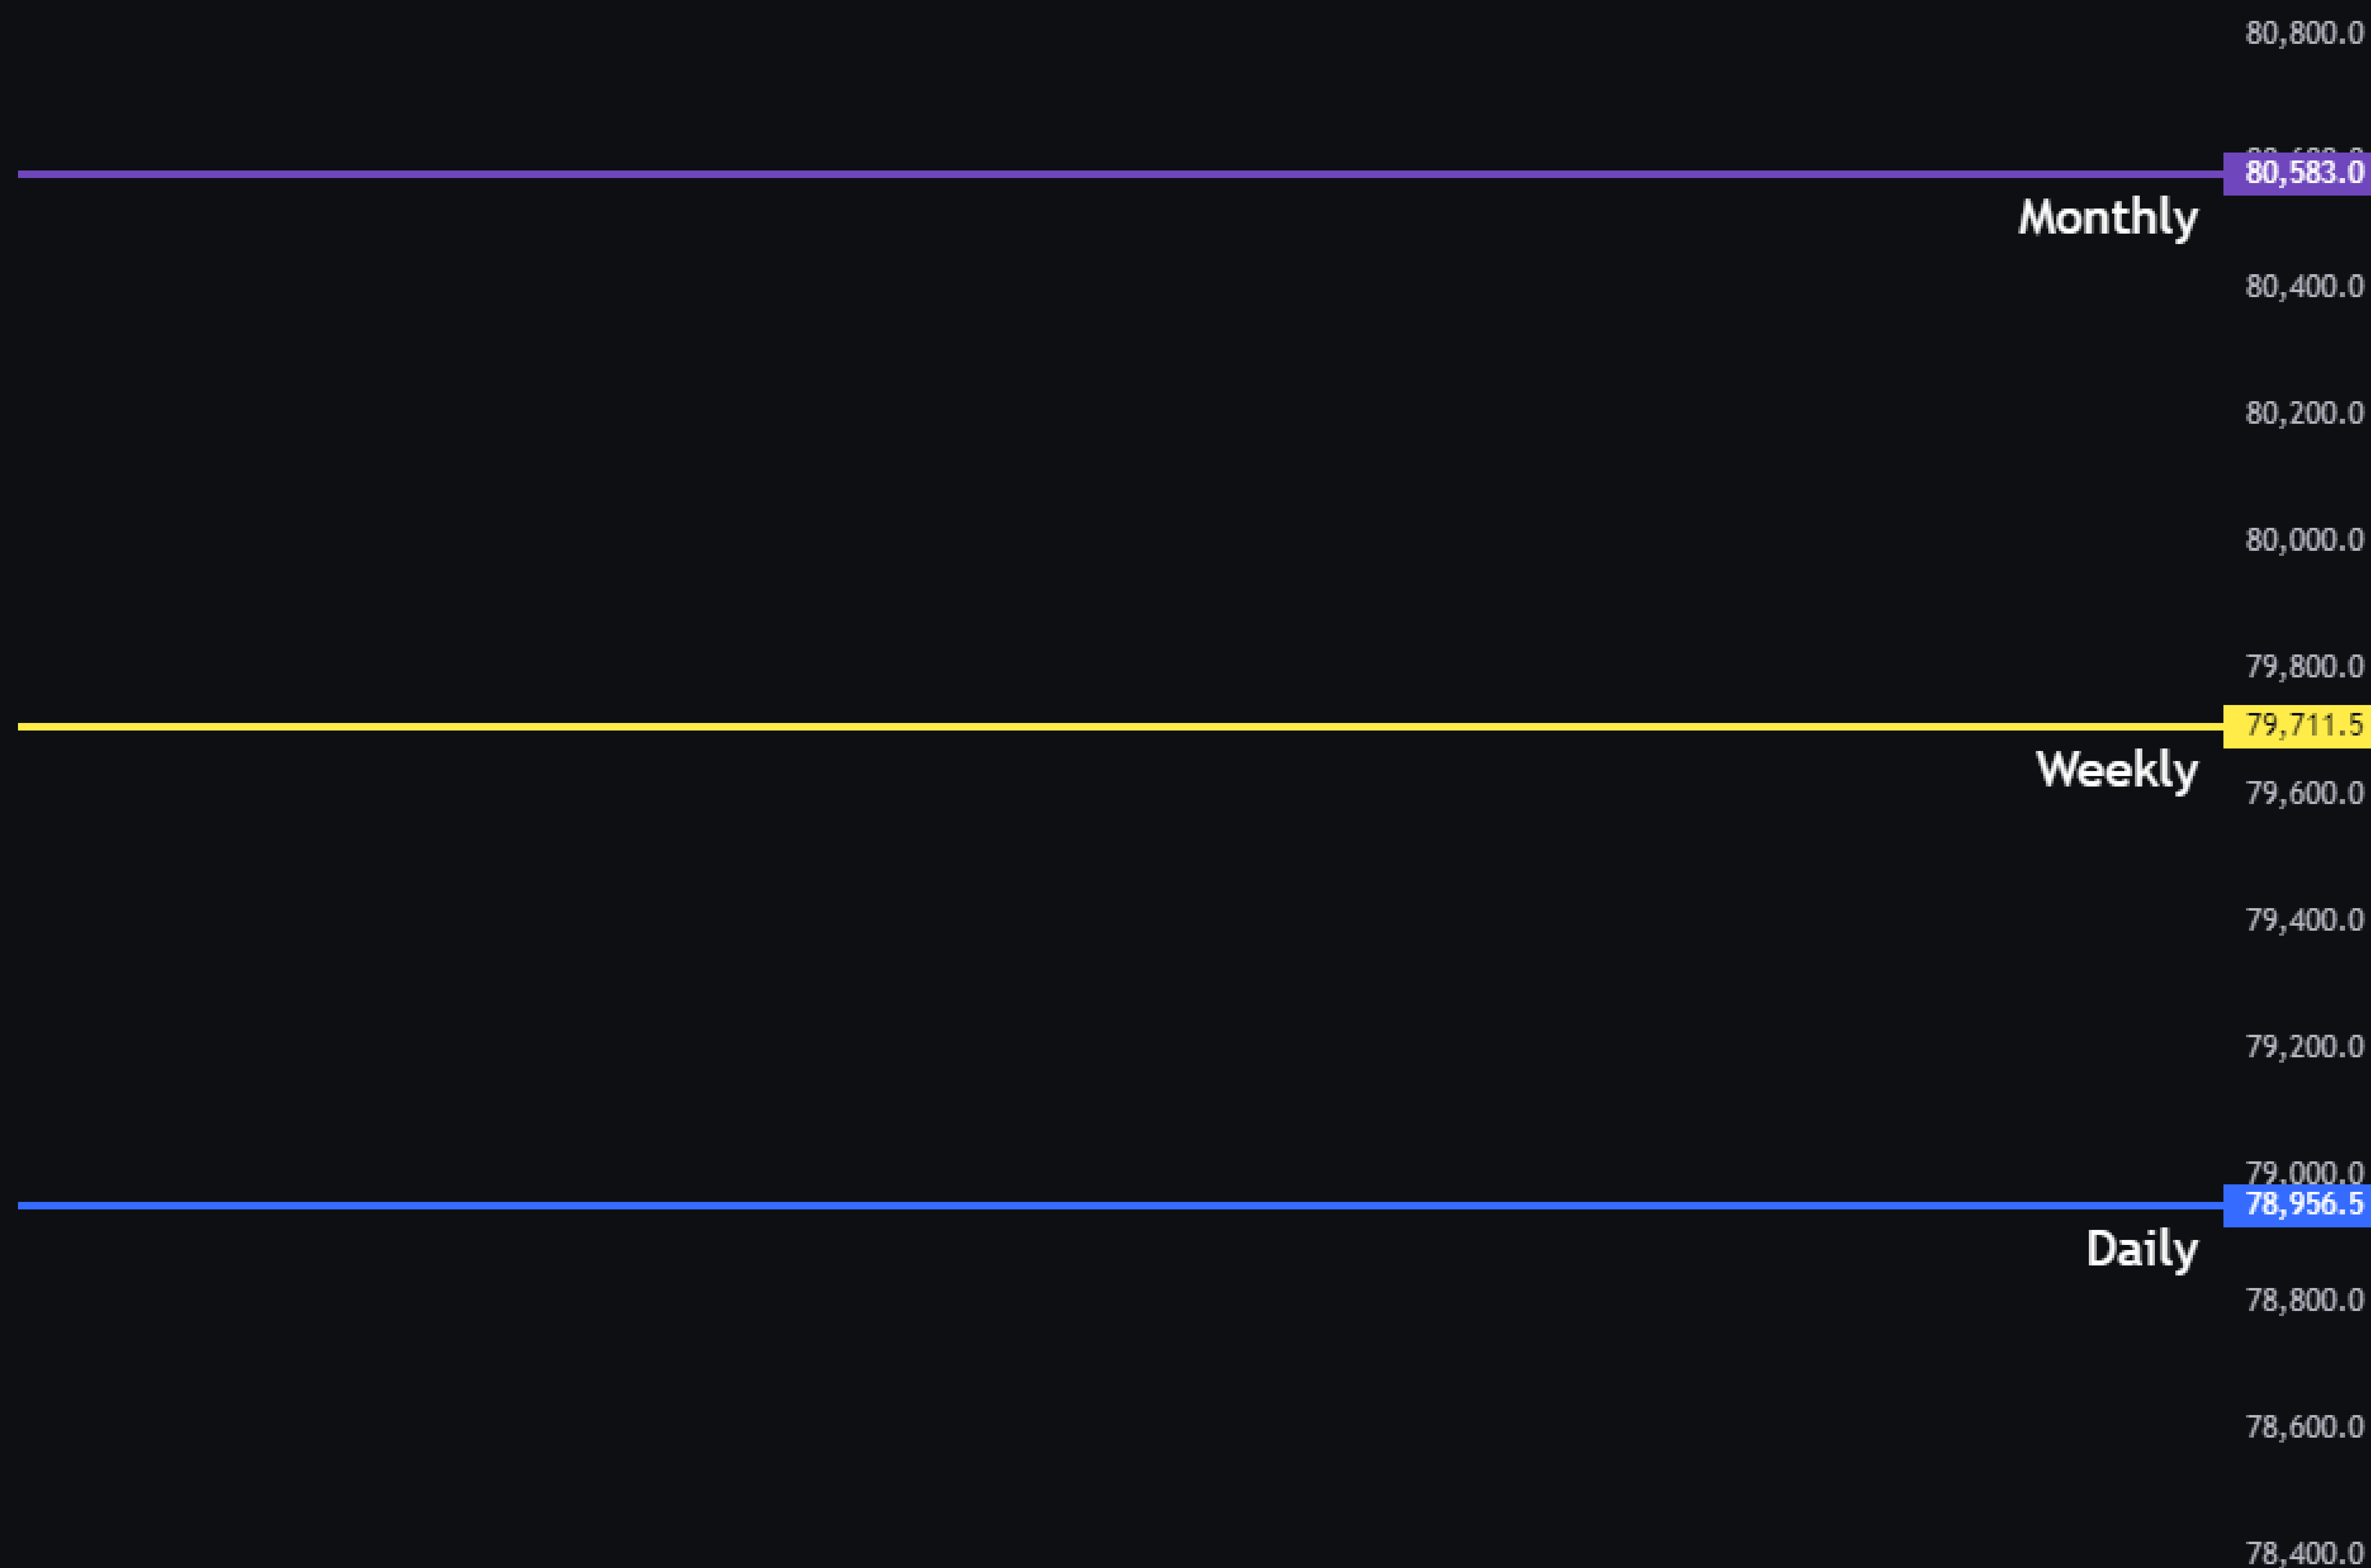

Basic

Support resistance

Basic module: Support and Resistance (3:23)

Horizontal Levels

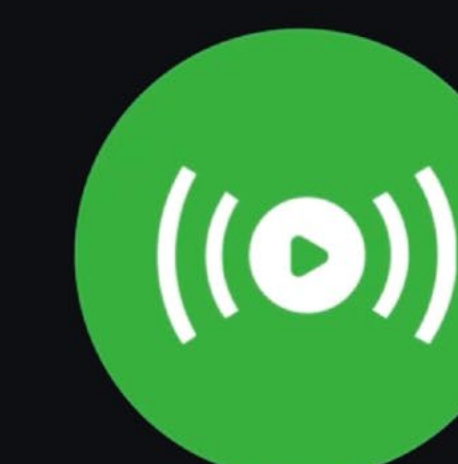

When marking out Daily, Weekly and Monthly levels, we always apply the following criteria to any market on the corresponding time frame:

HTF Level Resistance: we would look for a Green candle close, followed by a Red candle close.

HTF Level Support: we would look for a Red candle close, followed by a Green candle close.

Basic

Support resistance

Basic module: Support and Resistance (3:34)

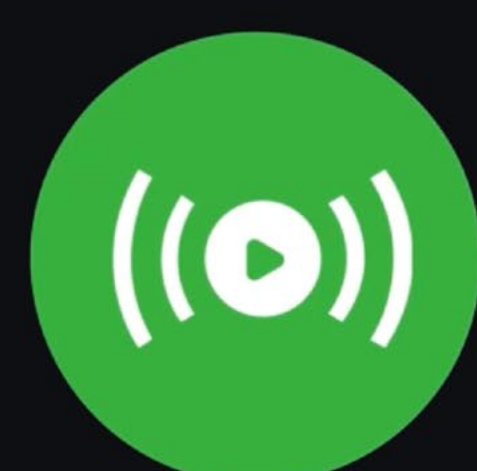

Horizontal Levels

Due to the frequent gaps in price action in the stock market, we always select the furthest away HTF level when marking out HTF levels.

Basic

Support resistance

Basic module: Support and Resistance (4:00)
