Provide powerful trend reversal entries.

Two trendlines form wedges with at least five combined touches.

Wedges can be implemented in all time frames. Stronger in higher time frames.

Volume declines while the wedge is forming.

Patterns module: Wedges

In the rising wedge pattern, the price rises and converges and each follow-through gets smaller.

Patterns module: Wedges (13:41)

Wedges: How to trade

Entry at the apex with additional confluence like horizontal levels and divergences.

Wait for the trendline break with confirmation for a breakout trade.

Wait for the backtest of the trendline break.

Possible price targets: 0.382 and 0.618 of Fibonacci retracements, and the start of the wedge formation.
